

Instrument Transformers

RITZ INSTRUMENT TRANSFORMERS, INC.

Current Transformers

DCFW

General Description

The DCFW is a large window type II current transformer designed for metering and protection applications. It is suitable for both indoor and outdoor service. It is for use with uninsulated bus bar and cable up to 600V or with higher voltage insulated conductors. The transformer meets all applicable IEEE, ANSI, CSA, and NEMA standards.

Construction

The ring type core is wound from high quality grain oriented silicon steel which has been annealed. The secondary winding is accomplished with heavy enameled copper wire evenly distributed around the core. The core and coil assembly is then completely encapsulated in a mold using polyurethane resin.

Secondary Terminals and Cover

Secondary terminals are tinned bronze compression type with a large 7.5 mm (.29") diameter cross-hole. A bronze pivoting short circuit device is an integral part of the secondary terminal arrangement. The short circuit device interferes with the proper placement of the clear polycarbonate cover when the shorting device is in the shorted position. The terminal cover is designed to accept a sealing device. An optional weather-proof secondary box is available.

Base Plates

The transformer is designed for wall mounting and comes with 4 through holes. An optional base fixture of marine grade aluminum can be ordered separately as an accessory.

Test Reports

Test reports according to the latest revisions of IEEE C57.13 are stored electronically at time of test and can be sent via email in customer preferred formats at time of shipment.
